EXECUTIVE SUMMARY xxiii

The West Valley Demonstration Project was established to show that technologies could be developed to safely clean up and solidify radioactive wastes.

INTRODUCTION xxix

An environmental surveillance and monitoring program was instituted to ensure that operations at the Project would not affect the public's health and safety or the environment.

ENVIRONMENTAL COMPLIANCE SUMMARY: CALENDAR YEAR 1991..... xxxv

Project activities are governed by federal and state regulations, Department of Energy Orders, national environmental protection acts, and various regulatory compliance agreements.

ENVIRONMENTAL COMPLIANCE SUMMARY: FIRST QUARTER 1991..... xli

All federal and state regulations and standards are integrated into the Project's compliance program.

CHAPTER 1. ENVIRONMENTAL MONITORING PROGRAM INFORMATION

The radionuclides monitored at the Project are those that might produce relatively higher doses or that are most abundant in air and water effluents discharged from the site.

Introduction 1-1

High-level Waste Treatment 1-1

Table of Contents

Radiation and Radioactivity	1-2
Measurement of Radioactivity	1-3
Measurement of Dose	1-3
Environmental Monitoring Program Overview	1-3
1991 Activities at the West Valley Demonstration Project	1-5
1991 NEPA Activities	1-6
1991 Changes in the Environmental Monitoring Program.....	1-6
RCRA Reports	1-7
Toxic Chemical Inventory.....	1-7
On-site Environmental Training.....	1-8
Self-assessment	1-8

CHAPTER 2. ENVIRONMENTAL MONITORING

The West Valley Demonstration Project's environmental monitoring program includes monitoring and sampling of liquids and air effluents both on- and off-site. Deer, fish, milk, hay, and various fruits and vegetables are also sampled.

Pathway Monitoring	2-1
Sampling Codes	2-1
Air Sampler Location and Operation	2-1
Water Sampler Location and Operation	2-4
Radiological Monitoring	
Air Monitoring	2-4

Table of Contents

Surface Water and Sediment Monitoring	2-8
Radioactivity in the Food Chain	2-10
Direct Environmental Radiation Monitoring	2-13
Meteorological Monitoring	2-16
Special Monitoring	2-17
Nonradiological Monitoring	
Air Monitoring	2-18
Surface Water Monitoring	2-18

CHAPTER 3. GROUNDWATER MONITORING

Groundwater is routinely sampled for radiological and chemical parameters both inside the WVDP site security fence and around the site to determine and document any effect of site activities on groundwater quality.

Geologic History of the West Valley Site	3-1
Hydrogeology of the West Valley Site	3-1
Groundwater Monitoring Program Overview	3-4
Groundwater Sampling Parameters	3-11
Sampling Methodology	3-11
Groundwater Monitoring Results	3-14
Contamination Indicator Monitoring of the Sand and Gravel Unit	3-17
Contamination Indicator Monitoring of the Till-Sand Unit	3-18

Table of Contents

Contamination Indicator Monitoring of the Unweathered Lavery Till Unit	3-19
Contamination Indicator Monitoring of the Lacustrine Unit	3-19
Contamination Indicator Monitoring of the Weathered Lavery Till Unit	3-20
Results of Monitoring of Site Groundwater for Volatile Organic Compounds	3-20
Long-term Trends of Gross Beta and Tritium at Selected Groundwater Monitoring Locations	3-21
Groundwater Quality Parameters	3-22
Off-site Groundwater Monitoring Program	3-22

CHAPTER 4. RADIOLOGICAL DOSE ASSESSMENT

Because of the difficulty of measuring the small amounts of radionuclides emitted from the site, computer models are used to calculate dose estimates. Estimates are based on concentrations of radionuclides measured in air and water collected from on-site effluent points.

Dose Estimates	4-1
Computer Modeling	4-1
Sources of Radiation Energy and Radiation Exposure	4-1
Health Effects of Low Levels of Radiation	4-2
Dose Estimation Methodology	4-2
Estimated Radiological Dose from Airborne Effluents	4-3
Estimated Radiological Dose from Liquid Effluents	4-4
Estimated Radiological Dose from All Pathways	4-4

Table of Contents

Estimated Radiological Dose from Local Food Consumption	4-5
Conclusions	4-7

CHAPTER 5. QUALITY ASSURANCE

The West Valley Demonstration Project's quality assurance program certifies that sample collection and analyses are consistent, precise, and accurate.

Organizational Responsibilities	5-1
Program Design	5-1
Procedures.....	5-2
Quality Control in the Field	5-2
Quality Control in the Laboratory	5-3
Personnel Training	5-4
Record Keeping	5-4
Chain-of-custody Procedures	5-4
Audits	5-4
Performance Reporting	5-5
Independent Data Verification	5-5
