EXECUTIVE SUMMARY xxiii

The West Valley Demonstration Project was established to prove that technologies could be developed to safely clean up and solidify radioactive wastes.

INTRODUCTION xxxi

An environmental surveillance and monitoring program was developed and implemented to ensure that operations at the WVDP would not affect public health and safety or the environment.

ENVIRONMENTAL COMPLIANCE SUMMARY: CALENDAR YEAR 1994 xli

Project activities are governed by federal and state regulations, Department of Energy Orders, and regulatory compliance agreements.

CHAPTER 1. ENVIRONMENTAL MONITORING PROGRAM INFORMATION

The radionuclides monitored at the Project are those that might produce relatively higher doses or that are most abundant in air and water effluents discharged from the site.

Introduction	1-1
Radiation and Radioactivity	1-1
Measurement of Radioactivity	1-2
Measurement of Dose	1-2
Environmental Monitoring Program Overview	1-3
Data Reporting	1-3
1994 Changes in the Environmental Monitoring Program	1-5
High-level Waste Treatment	1-5
Supernatant Pretreatment	1-5
Pre-Vitrification Activities	1-6
1994 Activities at the West Valley Demonstration Project	1-7
Pre-Vitrification Activities	1-7
Low-level Waste Processing	1-7
Waste Minimization Program	1-8
1994 National Environmental Policy Act (NEPA) Activities	1-9
On-site Environmental Training	1-9
Self-Assessment	1-10

Table of Contents

CHAPTER 2. ENVIRONMENTAL MONITORING

The West Valley Demonstration Project's environmental monitoring program includes monitoring and sampling of liquid and air effluents both on- and off-site. Deer, fish, milk, hay, and various fruits and vegetables are also sampled.

Pathway Monitoring	2-1
Sampling Codes	2-1
Air Sampler Location and Operation	2-2
Water Sampler Location and Operation	2-2
Radiological Monitoring	2-2
Air Monitoring	2-2
Surface Water and Sediment Monitoring	2-13
Radioactivity in the Food Chain	2-20
Direct Environmental Radiation Monitoring	2-24
Meteorological Monitoring	2-28
Special Monitoring	2-29
Nonradiological Monitoring	2-31
Air Monitoring	2-31
Surface Water Monitoring	2-31
Drinking Water Monitoring	2-33

CHAPTER 3. GROUNDWATER MONITORING

Groundwater is routinely sampled for radiological and chemical parameters both inside the WVDP site security fence and around the site to determine and document any effect of site activities on groundwater quality.

Geology of the West Valley Site	3-1
Surface Water Hydrology	3-2
Hydrogeology of the West Valley Site	3-3
Groundwater Monitoring and Protection Program Overview	3-6
Routine Groundwater Sampling	3-13
Expanded Characterization Sampling	3-16
Sampling Methodology	3-17
Groundwater Monitoring Results	3-19
Results of Contamination Indicator Monitoring of the Sand and Gravel Unit	3-22
Results of Contamination Indicator Monitoring of the Lavery Till-Sand Unit	3-23
Results of Contamination Indicator Monitoring of the Weathered Lavery Till Unit	3-23

Table of Contents

Results of Contamination Indicator Monitoring of the Unweathered Lavery Till Unit	3-23
Results of Contamination Indicator Monitoring of the Kent Recessional Sequence	3-25
Results of Sampling for Groundwater Quality Parameters	3-25
Results of Sampling for Appendix IX and Target Compound List Metals	3-25
Results of Routine and Expanded RFI Sampling for Organic Compounds	3-27
Long-term Trends of Gross Beta and Tritium at Selected Groundwater Monitoring Locations	3-30
Results of Expanded Characterization for Radiological Parameters	3-30
Subsurface Investigation of Elevated Gross Beta on the North Plateau	3-33
Discussion of Site Groundwater Monitoring	3-34
Off-site Groundwater Monitoring Program	3-35

CHAPTER 4. RADIOLOGICAL DOSE ASSESSMENT

Because of the difficulty of measuring the small amounts of radionuclides emitted from the site, computer models are used to calculate dose estimates. Estimates are based on concentrations of radionuclides measured in air and water collected from on-site effluent points.

Introduction	4-1
Radioactivity	4-1
Radiation Dose	4-2
Units of Measurement	4-2
Sources of Radiation	4-3
Health Effects of Low-level Radiation	4-4
Exposure Pathways	4-4
Dose Assessment Methodology	4-4
Predictive Computer Modeling	4-6
Environmental Media Concentrations	4-6
Airborne Releases	4-6
Waterborne Releases	4-8
Environmental Media Concentrations	4-9
Predicted Dose from Airborne Emissions	4-10
Predicted Dose from Waterborne Releases	4-11
Predicted Dose from all Pathways	4-13
Risk Assessment	4-13
Summary	4-13

Table of Contents

CHAPTER 5. QUALITY ASSURANCE

The West Valley Demonstration Project's quality assurance program certifies that sample collection and analyses are consistent, precise, and accurate.

Organizational Responsibilities	5-1
Program Design	5-1
Procedures	5-2
Quality Control in the Field	5-2
Quality Control in the Laboratory	5-3
Personnel Training	5-5
Record Keeping	5-5
Chain-of-Custody Procedures	5-5
Audits and Appraisals	5-6
Self-Assessments	5-6
Data Management and Data Validation	5-6
Data Reporting	5-7
