<b>EXECUTIVE SUMMARY</b>	xxv
<i>The West Valley Demonstration Project was established to prove that technologies could be developed to safely clean up and solidify radioactive wastes.</i>	
<b>INTRODUCTION</b>	xxxiii
<i>An environmental surveillance and monitoring program was developed and implemented to ensure that operations at the WVDP would not affect public health and safety or the environment.</i>	
<b>ENVIRONMENTAL COMPLIANCE SUMMARY: CALENDAR YEAR 1995</b>	xliii
<i>Project activities are governed by federal and state regulations, Department of Energy Orders, and regulatory compliance agreements.</i>	
<b>CHAPTER 1. ENVIRONMENTAL MONITORING PROGRAM INFORMATION</b>	
<i>The radionuclides monitored at the Project are those that have the potential to contribute a dose above background or that are most abundant in air and water effluents discharged from the site.</i>

## CHAPTER 2. ENVIRONMENTAL MONITORING

*The West Valley Demonstration Project's environmental monitoring program includes monitoring and sampling of liquid and air effluents both on- and off-site. Deer, fish, milk, hay, and various fruits and vegetables are also sampled.*

## CHAPTER 3. GROUNDWATER MONITORING

*Groundwater is routinely sampled for radiological and chemical parameters both inside the WVDP site security fence and outside the site to determine and document any effect of site activities on groundwater quality.*

Geological History of the West Valley Site	3-1
Surface Water Hydrology of the West Valley Site	3-2

## CHAPTER 4. RADIOLOGICAL DOSE ASSESSMENT

*Because of the difficulty of directly measuring any dose contributed by the WVDP to the off-site environment and the public, computer models are used to calculate dose estimates. Estimates are based on concentrations of radionuclides measured in air and water collected from on-site effluent points.*
