West Valley Demonstration Project
Decommissioning Status

Bryan Bower
Department of Energy

Quarterly Public Meeting
February 26, 2014

www.wv.doe.gov
In 2010, DOE published the Final Environmental Impact Statement and Record of Decision (ROD) for Decommissioning and/or Long-Term Stewardship at the West Valley Demonstration Project (WVDP) and the Western New York Nuclear Service Center (WNYNSC).

**Phase 1 Decommissioning**

- **Phase 1 Facility Disposition**
  - Relocate 275 HLW Canisters to new dry cask storage facility
  - Demolish Vitrification Facility (Vit) and Main Plant Process Building (MPPB)
    - Remove ancillary facilities
    - Ship legacy Low Level Waste

- **Phase 1 Soil Remediation**
  - Remove Below Grade Portion of MPPB (including source area of plume), Vit, 01-14
  - Remove Lagoons and Liquid Waste Treatment Facility
  - Ship Legacy TRU Waste
  - Remove Remote Handled Waste Facility and remaining ancillary facilities
  - Remediate all WMA 1 & 2 Soil

* Based on funding at $75 M/yr

**Phase 2 Decommissioning**

- **Phase 2 Decisions**
  - HLW Canister Shipment (permanent disposal decision)
  - Closure decision for Waste Tank Farm
  - Closure decisions for NRC-licensed Disposal Area and State-licensed Disposal Area

**Phase 2 Decisionmaking ROD**
- Final Decommissioning ROD
- Phase 2 Decommissioning Plan

**Phase 1 Decommissioning Plan**
- Phase 1 Decommissioning ROD
- Phase 1 Decommissioning Plan
Phase 1 Facility Disposition

• **Scope of work includes:**
  - Complete high level waste (HLW) canister relocation at WVDP
  - Process, ship and dispose of all legacy waste off-site
  - Demolition and removal of the Main Plant Process Building (MPPB)
  - Demolition and removal of the Vitrification (Vit) Facility
  - Complete all work described in the Performance Work Statement
    - Remove ancillary facilities
    - Manage and maintain site infrastructure
    - Conduct environmental monitoring
    - Maintain the underground storage tanks, the NRC-licensed disposal area, and the Permeable Treatment Wall

• **Scope of work performed by CH2M HILL B&W West Valley, LLC (CHBFWV) through contract awarded in 2011**
• Plan scopes of work for Phase 1 soil remediation in ~2018*

• Award contract(s) in ~2019*

• Planned scopes of work will include:
  – Remove below grade portions of MPPB and vitrification facility, including the source area of the plume
  – Remove the lagoons and liquid waste treatment facility
  – Ship the legacy transuranic (TRU) waste (potentially)
  – Remove the RHWF and remaining ancillary facilities (after shipment of TRU waste)
  – Remediate WMA 1 & 2 soil

*Schedules for Phase 1 soil remediation are contingent upon the end date of the Phase 1 facility disposition scope of work.
At the end of Phase 1 decommissioning (Phase 1 facility disposition plus Phase 1 soil remediation) five facilities will remain:

- Tank farm with the tank and vault drying system
- HLW storage casks
- NDA with cap and barrier wall
- SDA with cap and barrier wall
- Construction and Demolition Debris Landfill
The Final Environmental Impact Statement for Decommissioning and/or Long-Term Stewardship at the West Valley Demonstration Project and Western New York Nuclear Service Center addresses the developed portion of the site in 10 waste management areas (WMA).
WMA 1 includes:

- Main Plant Process Building (MPPB)
- Plant office building
- Vitrification Facility
- Load-in/Load-out Facility
- Utility Room
- Fire Pump House
- Water storage tank
- Laundry
- Fuel Receiving and Storage
Main Plant Process Building (MPPB)

Vitrification Facility (Vit)

Load-in/Load-out Facility

Plant Office Building

Fuel Receiving & Storage Building (FRS)

Utility Room Expansion

Laundry Room

Utility Room

Fire Pumphouse

Water Storage Tank

01-14 Building

WMA 3 Status of Tanks

• Tank & Vault Drying System (T&VDS) installed and operational in December 2010
• Status of tank liquids
  • Tank 8D-1 – all liquid evaporated
  • Tank 8D-2 – all liquid evaporated
  • Tank 8D-3 – all liquid evaporated
  • Tank 8D-4 – 4,630 gallons of liquid/sludge remain
• Status of vaults and containment pans
  • Tank 8D-1 vault liquid is below level indicator (<2 inches and may be dry)
  • Tank 8D-2 vault liquid is below level indicator (<2 inches and may be dry)
  • All liquid in containment pans of tanks 8D-1 and 8D-2 evaporated
  • Tank 8D-3/8D-4 vault liquid evaporated
• At the end of Phase 1 decommissioning the T&VDS will be operational; tanks and their support structures will remain in place
The Construction and Demolition Debris Landfill (CDDL) Status

• CDDL is inactive
• Monitoring and maintenance will continue through Phase 1 decommissioning
1. Lag Storage Area 1
2. Lag Storage Area 2
3. Lag Storage Area 3
4. Lag Storage Area 4
5. Shipping depot
6. Chemical Process Cell Waste Storage Area
7. Remote-Handled Waste Facility (RHWF)
8. Lag Storage Building
9. Four Hazardous Waste Storage Lockers
## WMA 5 Status

NRC-Licensed Disposal Area Status

- A geomembrane cap and barrier wall were installed in 2008 to prevent water infiltration
- Liquid Pretreatment System is operable
- The NDA will remain in place during Phase 1 decommissioning
Orthoimage of WMA 8 State-Licensed Disposal Area (SDA)

State-Licensed Disposal Area Status

- The geomembrane cap and barrier wall prevent groundwater infiltration into the disposal area
- The leachate treatment facility was clean-closed and no longer stores mixed waste
- The SDA will remain in place during Phase 1 decommissioning
1. Drum Cell
2. Subcontractor Maintenance Area
3. NDA Trench Container Area Pad

At the end of Phase 1 decommissioning (Phase 1 facility disposition plus Phase 1 soil remediation) five facilities will remain:

- Tank farm with the tank and vault drying system
- HLW storage casks
- NDA with cap and barrier wall
- SDA with cap and barrier wall
- Construction and Demolition Debris Landfill
Phase 2 Decommissioning

• The Phase 2 decommissioning decision includes WVDP and WNYNSC facilities:
  • NRC-Licensed Disposal Area
  • State-Licensed Disposal Area
  • Waste Tank Farm
  • Construction and Demolition Debris Landfill
  • Contaminated soils and sediments
    – Non source area of the plume
    – Cesium prong
    – Streams
In 2010, DOE published the Final Environmental Impact Statement and Record of Decision (ROD) for Decommissioning and/or Long-Term Stewardship at the West Valley Demonstration Project (WVDP) and the Western New York Nuclear Service Center (WNYNSC)

- **Phased Decisionmaking ROD**
- **Phase 1 Decommissioning Plan**

## Phase 1 Decommissioning

*Complete by 2020*

### Phase 1 Facility Disposition
- Relocate 275 HLW Canisters to new dry cask storage facility
- Demolish Vitrification Facility (Vit) and Main Plant Process Building (MPPB)
  - Remove ancillary facilities
  - Ship legacy Low Level Waste

### Phase 1 Soil Remediation
- Remove Below Grade Portion of MPPB (including source area of plume), Vit, 01-14
- Remove Lagoons and Liquid Waste Treatment Facility
- Ship Legacy TRU Waste
- Remove Remote Handled Waste Facility and remaining ancillary facilities
- Remediate all WMA 1 & 2 Soil

* Based on funding at $75 M/yr

## Phase 2 Decommissioning

*Decisions made by 2020*

### Phase 2 Decisions
- HLW Canister Shipment (permanent disposal decision)
- Closure decision for Waste Tank Farm
- Closure decisions for NRC-licensed Disposal Area and State-licensed Disposal Area
